4000 Basel, August 12, 1991 B/dg

This is to certify that

Dr. Dimitris Pasparakis

has been working as a postgraduate fellow at the Neuro-Orthopaedic Unit at the Department of Orthopaedic Surgery of the University of Basel, Switzerland, at the Children's Hospital Basel, between September 25, 1988 and October 31, 1989.

He worked as a member of our clinical team and was engaged in an extensive follow-up study of hip joint reconstructions for neurogenic dislocation in patients with cerebral palsy.

His practical work included regular assistance in paediatric-orthopaedic operations. He participated in the plaster clinic, applying reflex inhibiting plaster and plastic casts. He took part in our neuro-orthopaedic out-patient clinic twice weekly, where we see patients with cerebral palsy, myelomeningoceles, muscular dystrophy and other neurogenic disorders of movement.

We liked him for his kind and cooperative character. He showed excellent capabilities in finding pertinent literature, helping to solve many problems in our daily work. He is able to speak German, English, Italian, French and Greek, which helped to work in our group with patients coming from many countries. These capabilities are based on an excellent and broad medical and general knowledge.

Sincerely,

Prof. Dr. Jürg U. Baumann
Head of the Neuro-Orthopaedic Unit
